

## Lab 4

You should create simple todo list application.

- In the main screen will be the list of todo tasks;
- Todo tasks should be saved on Room database;
- Each todo task has following fields:
  - ID (Primary key, autoincrement)
  - title
  - description
  - status
  - Category (Foreign key)
  - Duration
- Category model has only “ID” and “title”;
- In the list item display only title, status and category;
- Second screen is the todo detail page, where you should display all information about todo task;
- Use Fragments for all pages.
